

## **Adjustment Program (Version 4.0) for Stylus COLOR 600 / 640 / 660 Operating Instructions**

Compared with MS-DOS program, the User Interface of this Windows program has quite changed. But the procedure of adjustment is the same as MS-DOS program.

### **1. Operating Environment:**

- Windows 95 OSR2.0 or higher and Windows98.
  
- Use only **LPT1:** as printer port.

### **2. Setup procedures:**

The following procedures are required to execute this program.  
Insert Adjustment Program Disk1 and boot Setup.exe.  
Follow the procedures, insert Disk2 and complete installing the Adjustment Program.  
This enables you to perform the Adjustment Program from the "Start Menu".

### **3. Cautions:**

- 1) When you operate this program on the Windows 95, you cannot operate it with Status Monitor is running. Close Status Monitor on Task tray before executing the adjustment program.
  
- 2) When five minutes or more has passed without any printing operation, the carriage will locked in the CR Lock position. In this case, turn the printer off once and back on again, then re-execute the adjustment program.
  
- 3) Do not change the setting for "Font size" in "settings tab" of the "Display Property" window.
  
- 4) Please do not start the Service Program before connecting the printer with a parallel I/F cable.  
If you do not follow the instruction, the program will freeze.
  
- 5) Please do not send any commands during Check Pattern printing.
  
- 6) In case the power's turned off, or the parallel I/F cable is removed during the Adjustment Program, please restart the Adjustment Program.
